SUMMARY

Full-stack developer who designs, builds and runs production systems end to end: Postgres schemas with row-level security, payment flows, offline-capable PWAs and React Native apps. Has shipped seven live products for non-profits, community organisations and small businesses, each handling real users, real payments or real records. Used to owning a product alone, from working out requirements with non-technical clients to deployment, support and fixes in production.

SKILLS

Languages: TypeScript, JavaScript, SQL (PostgreSQL, PL/pgSQL), HTML, CSS

Frontend: React, Next.js, Vite, Tailwind CSS, PWAs (service workers, offline sync, IndexedDB), PDF.js

Mobile: React Native, Expo, EAS Build, Google Play release

Backend: Supabase (Postgres, row-level security, Auth, Storage, Realtime, Edge Functions), Node.js, Deno, Vercel serverless

Payments and APIs: Paystack (checkout, webhooks, server-side verification), Resend, Alchemy, ethers.js, Telegram Bot API

Tooling: Git, GitHub Actions, Playwright, Vercel, DNS and domain setup

EXPERIENCE

Independent Full-Stack Developer, DaleX

Warri, Nigeria (remote) • 2023 to Present

Designs and delivers web platforms, mobile apps and on-chain tools for organisations and businesses, working directly with each client from brief to launch.

Event ticketing and door check-in platform

sccwdwarri.online

React, TypeScript, Supabase (Postgres, Edge Functions), Paystack, Resend, Playwright

- Built the complete ticketing system for a 200-seat regional gala night: Paystack checkout with webhooks and server-side payment verification, a named QR ticket for every guest, and VIP tables of four.
- Wrote an offline-first door scanner (PWA) for ushers: cached guest list, check-ins queued and synced when signal returns, duplicate scans caught across phones, and a named login for each scanner.
- Rendered ticket images on the server so the emailed ticket, the download and the printout always match; added admin sales reports by area, partner and sponsor payments, and grouped guest-list exports.
- Replaced the previous year's hand-designed tickets sent over WhatsApp and a manual paper door list.

Music academy: learning platform and Android app

catholicmusicacademy.net

JavaScript, React Native, Expo (EAS), Supabase, Vercel serverless, Resend

- Built a learning management system from scratch: sequential module unlocking, reading gates, randomised question pools, grading, announcements and an admin course builder.
- Built the companion React Native app on the same backend; it is in Google Play closed testing.
- Hardened sign-in by moving password hashing to the server (PBKDF2 with per-user salts), and wrote the user and administrator manual.

Sheet-music library (PWA)

sccwdlibrary.xyz

PWA, PDF.js, IndexedDB, GitHub Actions

- Built a PWA that serves 5,000+ music scores to choirs across a region, replacing requests for copies that buried announcements in WhatsApp groups.
- Replaced the browser's PDF viewer with a PDF.js canvas renderer, pinch-to-zoom and prefetching, so scores open instantly; a GitHub Actions pipeline pre-renders 300-DPI previews.

Fundraising and finance ledger

scharvest.online

Supabase, JavaScript

- Fundraising ledger for a community finance committee: income, expenditure and pledges across two bank accounts, three admin accounts, and a confirm-before-save pattern to prevent entry errors.

DHE (Doubi's Hair Essentials): booking and product platform

Client project

Supabase (PL/pgSQL functions and triggers), JavaScript

- Built the booking engine inside Postgres (availability ranges, buffer times, client records and status history maintained by triggers), a product catalogue, a mobile-first admin panel and email alerts for new bookings.

Web3 tooling: WallVolt (built and sold) and NFT mint bot

Web3

Node.js, ethers.js, Alchemy, Telegram Bot API

- WallVolt: built and sold a multi-chain wallet analytics product with four live API endpoints (score, risk, approvals, resume); scans 90,000 blocks in chunks to stay within Alchemy's free-tier limits.
- A Telegram bot that watches for NFT mints and executes them the moment they open, on Ethereum and Base.

LEADERSHIP AND COMMUNITY

Head of ICT and App, MATAN Food Bank Foundation, Delta State

Web3 content creator, @dalewebx on X

Ongoing

- Writes and runs campaign content for Web3 projects including Quip Network, Wallchain and idOS.
